RYA PWC JETSKI

The RYA's proficiency course prepares you for riding safely and responsibly designed for first-time and experienced riders alike.

This certificate is required for launching in UK harbours and can be used to apply for the International Certificate of Competence, which is commonly required when using a personal watercraft abroad.

The RYA Personal Watercraft (PWC) Licence, often referred to as the RYA PWC Certificate or RYA Jetski Licence, is a widely recognized qualification that allows you to safely operate personal watercraft, such as jetski's, wave runners, or similar small motorized craft.

WHO IS THIS COURSE FOR?

The main purpose of the RYA PWC Licence is to enable you to operate a personal watercraft (PWC) safely, including jetskis, waverunners, and other similar craft.

This qualification ensures you understand how to operate these high-performance vehicles competently.

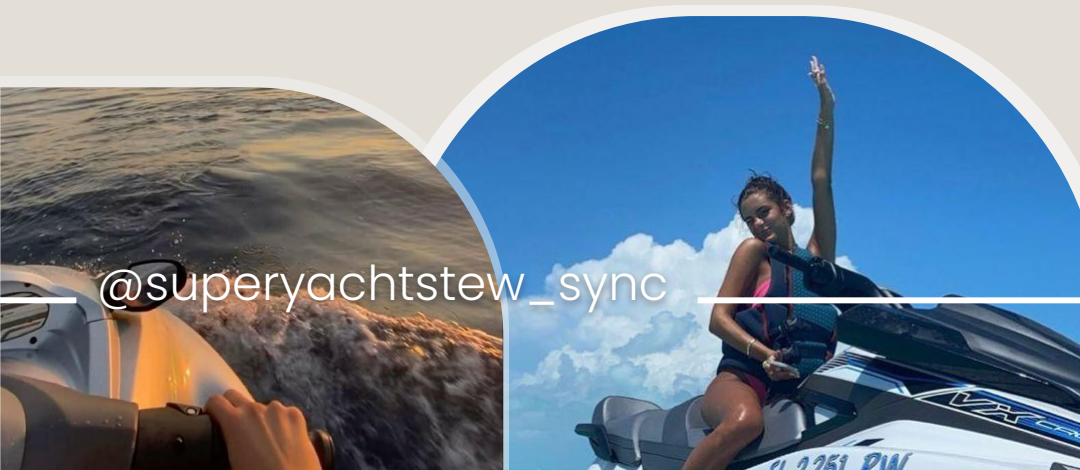

The qualification emphasizes the importance of environmental responsibility, teaching you how to operate your PWC without causing harm to the environment, especially in sensitive areas such as protected wildlife zones or near other recreational users.

While the RYA PWC Licence allows you to operate a PWC, it does not grant you permission to use it commercially (such as for hire or as part of a tour business). You may also have certain limitations on distance from shore depending on your location and the type of watercraft.

In many locations, especially in the UK and parts of Europe, you may need an RYA PWC Licence to rent or hire a jetski from a commercial operator. It is often required as proof of competence before being allowed to operate a PWC.

WHAT THIS COURSE COVERS

- Key safety principles, such as how to perform safe starts, maneuver in tight spaces, and handle the PWC at different speeds, especially under challenging conditions.
- Man-overboard recovery and safe docking.
- Basics of navigating a PWC, including understanding the rules of the road (Collision Regulations), local navigation markers, and safe operating distances from shore.
- Avoid hazards such as shallow water, rocks, and other vessels.
